

# TELESCOPIC PLATFORM SEATING

**Rugged durability.  
Dependable performance.**

## Telescopic Platform Seating

### Superior auditorium seating and platforms

Fixed systems or fully interchangeable seating configurations including telescopic, removable, portable, infill sections and 'elephant' doors. Our arena seating comes with a variety of decks and seats to suit any budget or facility. We have completed small arenas, up to and including NHL venues. We can assist in the design and provide seating systems that suit the characteristics of your facility. Our standard fixed galvanized bleacher with aluminum decks and plastic seats can be engineered to be telescopic.

## Specifications

### Standard Colors

RED - FR301

GREEN - FR603

BLUE - FR501

BLACK - FR001

### Arena Platforms

Integral power assures accurate, quiet and dependable extension and closing to maximize facility changes and to minimize time required.

Our system exceeds all systems in the industry by using a four column construction designed for rugged durability and offers you a strong, safe platform with your choice of deck covering to suit your individual needs.

All seats function on the telescopic principle and when closed provide either a flat fold front or closed back.

The operation is progressive and upon closing, all rows move to the closed position providing an increase of useable floor space.

The system incorporates a locking mechanism provided by individual row locks or cylinder locks which permit securement of any row in user position, and it operates only upon the unlocking and moving of the first row.

### Options

- Unique color matching
- Contrast color for inlays
- Various seat options
