

RETRACTABLE BLEACHER SEATING

Easy to use.
Reliable and safe.

Retractable Bleacher Seating

Unparalleled levels of service and quality

All seats function on the telescopic principle and when closed, provide either a flat fold front or closed back. The operation of the seating is progressive and upon closing, all rows move to the closed position providing an increase of usable floor space. The system incorporates a locking mechanism provided by individual row locks or cylinder locks. These permit securement of any row in user position, and it operates only upon the unlocking and moving of the first row. All bleacher components are fabricated in our plant where they are stringently tested and inspected to ensure a safe, top quality seating system.

- Unique color matching
- Wood bench seating
- Contrast color for inlays
- Bench back rest
- Back rest

Telescopic Bleachers

Our high density polyethylene modular seating is richly textured and available in 12 standard colors. The sculpt-formed seat is anatomically contoured with no planar surface to give a genuinely comfortable bleacher seat. The surface of the seat is a scuff resistant texture and the color is molded in so that it cannot wear off.

We also offer Southern Yellow Pine for the clients that prefer wood bench style seats. These seat boards have been finished in such a way that they are scuff resistant for high traffic areas. The seat modules are supplied with matching end caps. The wide color selection can give any room an aesthetically pleasing look. We can also supply a contrasting color for inlay lettering so that the client can include school or club names. For devices on moving and operating bleachers, contact us.

Portable Bleachers

This unit is used where no permanent attachment point is available or multiple configurations are needed within the facility. Using portable lift carts, the entire bleacher can be moved to various locations in the room.

Wall Attached Bleachers

They are easy to operate and available in a variety of materials and colors. Units come with closed deck, intermediate aisle steps, center aisle hand rails, ready rails and manual or integral power systems.

Recessed

This model requires minimal space in the closed position. The unit normally fits into a pocket in a wall or under a balcony which allows for greater section and strength in the balcony cantilever, still allowing legal aisle step rise from bleachers to balcony.

Reverse Fold

These units are floor attached at the first row. They open and close the opposite way and the stacked unit becomes a divider wall that separates the room.
